Project Understanding

Project Planning

- Real Problem
- Domain and Subdomain Understanding, EcoSystem
- Architecture: 3-Tier/N-Tier, Clean Architecture, Microservices
- Technologies: Angular, Web API/Node.js, SQL Data/NoSQL Database

Project Flow/Tools

- Technology Fundamentals
- Fixed Some Bugs
- Workflows: Cart, Payment Gateway, Invoice, Login/SignUp/Forgot Password, Dashboard, Reports, Emails, etc.
- Database Operations: CRUD Operations, Paging, Searching, Sorting
- Structure Data: SQL Server, No SQL Database
- Unstructured Data: Files (PDFs, images, audio, videos) - Cloud Storage

Project Coding

- Analyze & Understand the Requirements
- Database Tables and their Relationships
- Code, Logic, Design Screen

Projects To DO

- EdTech Platform - DotNetTricks
- Ecommerce Website - Flipkart, Amazon
- Food Delivery - McDonald's, PizzaHut, Dominoz
- Online Doctor Consultation - Practo
- Job Portal - Naukri.com
- Online Service - Urban Clap, Uber, OLA
- Video Streaming - Netflix, Amazon prime
- Online Booking - Flight, Hotel

Angular Route Guards

- Route guards are functions which are called when router tries to activate or deactivate certain routes
- Guards control how the user navigates in Angular App
- Using route guards you can stop a user from visiting certain routes
- Used to protect routes from unauthorize access
- A route can have multiple guards and the guards are checked in the order they were added to the route

Route Guard Types

- CanActivate - Checks the route access for a user
- CanActivateChild - Checks the child routes access for a user
- CanDeactivate - Checks to see if a user can leave a route
- CanLoad - Checks to see if a user can route to a module that lazy-loaded
- Resolve - Allows to get route data before a route activation

Interceptors

- Interceptors are a powerful mechanism that can be used to monitor, rewrite, and retry calls.
- You can intercept requests or responses before they are handled by then or caught.
